Lawrence M. Bass

lawmbass1@gmail.com

SUMMARY

Senior Software Engineer with 11+ years building React/TypeScript web applications and Node APIs. Owns complex reporting and planning UIs end-to-end, modernizes APIs, and hardens CI/test pipelines. Targeting Senior frontend / full-stack roles at large private-sector tech and finance companies.

SKILLS

React, TypeScript, JavaScript, Redux · Node.js, Express, MongoDB, Prisma · Docker, CI/CD · Cypress · Elasticsearch · Python · Git

EXPERIENCE

Senior Software Engineer — Booz Allen Hamilton Jul 2019 – Present

React/TypeScript platform for defense readiness planning and budget analysis

- Own major planning and reporting UIs end-to-end; shipped a new analysis tool as an MVP, shared charting (combo charts, multi-series toggles, before/after optimization views), and context-aware screens that hide irrelevant options based on user selections.
- Partnered with the data team to integrate a budget optimizer into planning and reporting UIs so planners can allocate spend across fiscal years in ways that match real usage; wired the frontend to Databricks-backed optimization.
- Led API and frontend modernization: migrated core user, profile, planning, and approval flows to a typed new API; removed legacy search paths; added React error boundaries and cleaner module structure.
- Stabilized Cypress (including chronic 503 failures) so CI pass/fail results are trustworthy for releases.
- Owned release work: change packages, in-person deployments, sprint App Ambassador, and consistent high throughput on bugs and features.
- Set durable engineering patterns — Prisma migration cleanup with backwards-compatible upgrades; fewer network calls by consolidating settings endpoints.
- Earlier: Aurelia → React/TypeScript port, Redux/context, Solr → Elasticsearch, CI/CD. Palantir Foundry and Kubernetes training; supporting a React app's migration to a new platform.

Software Engineer — Knexus Research (Naval Research Laboratory) Jun 2016 – Jul 2019

- Built features for an administrative information system and an internal workflow app; shipped Node/Express/MongoDB REST APIs and an API layer for tailored queries.
- Containerized and deployed applications; configured GitLab CI/CD; strengthened unit testing and release support.

Application Developer — IBM May 2015 – May 2016

- Built an internal visitation-request web application; migrated a client site to Drupal; remediated Fortify security findings and 508 accessibility issues.

EDUCATION

B.S. Computer Engineering — Shepherd University · May 2015
